

PYTHON

Cheat Sheet

codewithmosh.com

 [@moshhamedani](https://twitter.com/moshhamedani)

Variables

```
a = 1 (integer)
b = 1.1 (float)
c = 1 + 2j (complex)
d = "a" (string)
e = True (boolean)
```

Strings

```
x = "Python"
len(x)
x[0]
x[-1]
x[0:3]
```

Formatted strings

```
name = f"{first} {last}"
```

Escape sequences

```
\”
\’
\\
\n
```

String methods

```
x.upper()
x.lower()
x.title()
x.strip()
x.find("p")
x.replace("a", "b")
"a" in x
```

Numer functions

```
round(x)
abs(x)
```

Type conversion

```
int(x)
float(x)
bool(x)
string(x)
```

Falsy values

```
0
""
None
```

Conditional statements

```
if x == 1:
    print("a")
elif x == 2:
    print("b")
else:
    print("c")
```

Ternary operator

```
x = "a" if n > 1 else "b"
```

Boolean operators

```
x and y (both should be true)
x or y  (at least one true)
not x   (inverses a boolean)
```

Chaining comparison operators

```
if 18 <= age < 65:
```

For loops

```
for n in range(1, 10):
    ...
```

While loops

```
while n > 10:
    ...
```

Equality operators

```
== (equal)
!= (not equal)
```

Defining functions

```
def increment(number, by=1):  
    return number + by
```

Keyword arguments

```
increment(2, by=1)
```

Variable number of arguments

```
def multiply(*numbers):  
    for number in numbers:  
        print number
```

```
multiply(1, 2, 3, 4)
```

Variable number of keyword arguments

```
def save_user(**user):  
    ...
```

```
save_user(id=1, name="Mosh")
```

Creating lists

```
letters = ["a", "b", "c"]
matrix = [[0, 1], [1, 2]]
zeros = [0] * 5
combined = zeros + letters
numbers = list(range(20))
```

Accessing items

```
letters = ["a", "b", "c", "d"]
letters[0] # "a"
letters[-1] # "d"
```

Slicing lists

```
letters[0:3] # "a", "b", "c"
letters[:3] # "a", "b", "c"
letters[0:] # "a", "b", "c", "d"
letters[:] # "a", "b", "c", "d"
letters[::2] # "a", "c"
letters[::-1] # "d", "c", "b", "a"
```

Unpacking

```
first, second, *other = letters
```

Looping over lists

```
for letter in letters:
    ...
```

```
for index, letter in enumerate(letters):
    ...
```

Adding items

```
letters.append("e")
letters.insert(0, "-")
```

Removing items

```
letters.pop()
letters.pop(0)
letters.remove("b")
del letters[0:3]
```

Finding items

```
if "f" in letters:  
    letters.index("f")
```

Sorting lists

```
letters.sort()  
letters.sort(reverse=True)
```

Custom sorting

```
items = [  
    ("Product1", 10),  
    ("Product2", 9),  
    ("Product3", 11)  
]
```

```
items.sort(key=lambda item: item[1])
```

Zip function

```
list1 = [1, 2, 3]  
list2 = [10, 20, 30]  
combined = list(zip(list1, list2))  
# [(1, 10), (2, 20)]
```

Unpacking operator

```
list1 = [1, 2, 3]  
list2 = [10, 20, 30]  
combined = [*list1, "a", *list2]
```

Tuples

```
point = 1, 2, 3
point = (1, 2, 3)
point = (1,)
point = ()
point(0:2)
x, y, z = point
if 10 in point:
    ...
```

Swapping variables

```
x = 10
y = 11
x, y = y, x
```

Arrays

```
from array import array
numbers = array("i", [1, 2, 3])
```

Sets

```
first = {1, 2, 3, 4}
second = {1, 5}

first | second # {1, 2, 3, 4, 5}
first & second # {1}
first - second # {2, 3, 4}
first ^ second # {2, 3, 4, 5}
```

Dictionaries

```
point = {"x": 1, "y": 2}
point = dict(x=1, y=2)
point["z"] = 3
if "a" in point:
    ...
point.get("a", 0) # 0
del point["x"]
for key, value in point.items():
    ...
```

List comprehensions

```
values = [x * 2 for x in range(5)]
```

```
values = [x * 2 for x in range(5) if x % 2 == 0]
```

Set comprehensions

```
values = {x * 2 for x in range(5)}
```

Dictionary comprehensions

```
values = {x: x * 2 for x in range(5)}
```

Generator expressions

```
values = {x: x * 2 for x in range(500000)}
```

Handling Exceptions

```
try:
    ...
except (ValueError, ZeroDivisionError):
    ...
else:
    # no exceptions raised
finally:
    # cleanup code
```

Raising exceptions

```
if x < 1:
    raise ValueError("...")
```

The with statement

```
with open("file.txt") as file:
    ...
```

Creating classes

```
class Point:
    def __init__(self, x, y):
        self.x = x
        self.y = y

    def draw(self):
        ...
```

Instance vs class attributes

```
class Point:
    default_color = "red"

    def __init__(self, x, y):
        self.x = x
```

Instance vs class methods

```
class Point:
    def draw(self):
        ...

    @classmethod
    def zero(cls):
        return cls(0, 0)
```

Magic methods

```
__str__()
__eq__()
__cmp__()
```

Private members

```
class Point:
    def __init__(self, x):
        self.__x = x
```

Properties

```
class Point:
    def __init__(self, x):
        self.__x = x

    @property
    def x(self):
        return self.__x

    @property.setter
    def x.setter(self, value):
        self.__x = value
```

Inheritance

```
class FileStream(Stream):
    def open(self):
        super().open()
    ...
```

Multiple inheritance

```
class FlyingFish(Flyer, Swimmer):
    ...
```

Abstract base classes

```
from abc import ABC, abstractmethod

class Stream(ABC):
    @abstractmethod
    def read(self):
        pass
```

Named tuples

```
from collections import namedtuple

Point = namedtuple("Point", ["x", "y"])
point = Point(x=1, y=2)
```
